The **Retrotrip2** has been designed for approval for use on many historic or retrospective rallies to fill the vacuum left by a shortage of mechanical tripmeters. Those competitors who could source a genuine period tripmeter with the correct functions and with sufficient spare parts to get it calibrated were felt to have an unfair advantage. The Retrotrip has the functions and instant 'one in a thousand' calibration accuracy for any wheel changes etc, plus can be seen to be 'fiddle proof' because of the old style electro-mechanical clicking digits, hence its' widespread approval.

Dual Display

- Total Distance
- Inter Distance

Independently Zeroed displays

Display Lenses for increased digit size

- Mulsanne Model has ALL WHITE digits

12 Volt Illumination

Easily Calibrated

Dimensions: 120 x 75 x 85 (140 x 85 x 90 inc switches and mounting holes)

Requires a Brantz Sensor
