Brantz RETROTRIP BACK-TRACKER Instructions (BR59PK)

The Back-Tracker is a very useful little gismo designed to work with all of our RetroTrip range of tripmeters.

Its purpose is to allow an adjustment of the distance readouts on a RetroTrip in an overshoot situation.

Fitting:

The RetroTrip Back-Tracker comes in 2 different fitting forms; a Plug Kit Version (BR59PK) (ENCLOSED) and a Standard Crimed Version (BR59)

- **Plug Kit Version (BR59PK):** This unit comes with Back Leads terminating in 1 x 4 Pin Plug and 1 x 4 Pin Socket
    - Short Cable (Socket): To the Plug on the Retrotrip
    - Long Cable (Plug): To the Socket of the Wiring loom coming from the Sensor.
    - This version can be installed extremely easily both during initial intallation or as a retro fit to any existing Retrotrip previously installed using a Plug kit (BR43)

Use/Controls:

The Back-Tracker runs normally with the switch in the **'Discharge'** position.

In the event of an overshoot you pick the mid-point as you turn round and flick the switch to **'Store'**.

Your RetroTrip will stop counting as the Back-Tracker robs the incoming distance pulses, storing them until you arrive back at the place you went wrong.

At the point where you initially went wrong simply switch back to **'Discharge'**, the stored pulses will now count down as you travel the correct route (shown by the flashing LED) and once the countdown reaches '0' the Back-Tracker will automatically hand over to the RetroTrip which will now operate as normal.

The Back-Tracker also has a **CLEAR ALL** button; this is a black push button located on the top of the devise which when pressed will clear all the stored pulses and return the Retrotrip to its normal counting status – this may be required if you suddenly come upon a timing point.

- Only press the Clear All button when the switch is in the Discharge Position otherwise you will loose track of the pulses you are storing.
- Do not hold down the Clear All button or this will prevent both the Retrotrip and Back-Tracker to accumulate any distance measurement at all.
